- High-Speed SAN Storage
- Complete Privacy
- Guaranteed Physical Resources
- Recurrent Backups

All this is FREE during your trial offer.*

Now Available MaxV Plan B with Double the Horsepower!

Why Microsoft Hyper-V?

As a concept, virtualization applies to storage, networks, servers, applications, and access. Thousands of OEMs and ISVs worldwide are building products that complement or run on Microsoft's virtualization platform, and Microsoft is providing these partners the ecosystem that's crucial to success. At one-third the cost of competing offerings, Microsoft virtualization solutions are robust, rock solid, reliable, and enterprise ready. System Center will provide a single pane of glass for managing all assets, both virtual and physical, across the enterprise, making Microsoft the preferred solution of choice for MaximumASP and our customers.

Hyper-V Hosting from MaximumASP

As a managed hosting partner focused solely on Microsoft technologies since 2000, we are uniquely qualified to provide the superior support that our business is built on. Unparalleled expertise with Microsoft technologies lead to working directly with Microsoft as first to offer IIS 7 and SQL 2008 betas in a hosted environment; partnering in the Go Live Program for Hyper-V; and product co-launches built on WS 2008 with Hyper-V technology.
